There will be letters in the coordinate aviones that their students never use, but that is completely well. Or maybe you want to do this a full class activity. Well, except for the time I was in a hurry and accidentally USÁ © Azã©Car Blanca instead of Azã©car Morena. They were still edible, but let's simply say that I did not take them to the church with me according to the planned ... while I hoped that my baking cookie trays, began to go through the E|lgebra 2 of this year. Maybe horizontal stretching and compressions are outside the content of your course. However, it will definitely not want to print it double -sided. They will give them a challenge at the same time. It is such a crucial topic in a Lgebra 2 and plays a very important role in the notes of Shaun 2 that I am currently using to be based on my study plan of È|gebra 2. I was looking for inspiration for something to create . And, I have too many important mathematical concepts to teach my students to take care. If you hate cutting and laminating, you will definitely want to go for the version of 15 to a página. I love that each teacher can give their own type of rotation to this activity to try to meet the specific needs of the students of him. The practice of the past year (or I suppose that it should say that the practice of this year, since we still have 1.2 weeks of distance learning for the year) consisted of Dry erase cytic too disabled where I told students to verify their answers with desmos. Even if you choose to take the work sheet route, can I recommend placing the graph in a dry erasure pocket? The cards from 5 to a página look better and each of which have the instructions, but I realize that the copyings of copy are a reality in many districts. One of the problems does not spend a word. I can't wait to see what they can think of! A last thing. So you are thinking. Often These monitoring sheets to give a type of participation qualification for activities. I will review your answers and give them a new challenge. I have two reasons to do it. To help them in this regard, it generally tried to provide students with a small piece of paper to track their progress. It will make the lives of their students a lot of more very. A a This small group version of this activity, decide to make cards with each of the transformations written in them. The more important, I do not think that no teacher should use this activity in their classroom if they have not worked themselves. Yes, it was not my best lesson. They would simply mark their complete challenge on their tracking sheet and take a new challenge of the table. How could I give my students a very necessary practice with this concept? Yesterday, I had the need to create something. Project a transformation on the screen. One thing that my students always fight is to follow up on the challenges they have completed. You can use this in several ways. It is a type of totally new words, and I am very excited to try it in my classroom of á lgebra 2 in August or every time we can teach in the classroom again. Are you just my students?!! Then, I needed something self-verification. I decide a series of challenges that students must complete to receive "complete crop." If the groups exceed this number of challenge, I give them a lower amount of additional crime. After completing each challenge, they will bring it back to my desk. This small group version also required a small edition to the dry erasure template. I believe that not only the creation process is to revitalize, but also the act of seeing students around the world experience the activity that they believed through the remarkable power and the nature of social networks. Students can track their own progress. I love spending time and effort to create an activity for my students to use them. Visit those boxes at the bottom so that the students write in the word they found so that they can verify their work! I have done enough of this style of activity in my classroom. If you, the students, need a slightly more external motivation, you can use a stamp enifed enifed es euq .)x(F ,n³Áicnuf anu atneserp euq ocifjÁrg nu nebicer setnaidutse soL .oÁfased adac nanimret sartneim sanabjÁs sus racram A discontinuous line and a variety of alphabet letters extended around the coordinate plane. If you have a highly motivated group of students, you can get out of the equation and not demand students to consult your solutions with you. Therefore, print the blank response key and pruá © Belo yourself. And, because I couldn't help myself, I made two different versions of the cards, 5 to a página and 15 to a page. We will not be looking at a variety of revolts until our eyes bleed looking for the letters that explain reflection and translation. Sometimes I also break my faithful blow of a single hole to mark what challenges the students have completed. When these four letters are without drying, they form a common four -letter word for school. Ahhh ... sä ... transformations of functions. They have become my cookie recipe with chocolate sparks, and always receive enthusiastic critics. There are fifteen different transformations of f (x) that when recorded are joined to four of the letters in the coordinate level. And, correct the room throughout the time like a chicken with the head cut trying to answer questions after question while redirecting the groups that seemed to be using their chromebooks for things that were not in desmos. Activity of self-verificaton for victory! Because I like to complicate things too much, I made several versions of this transformation of the activity of the words of functions. All versions currently use the same letters and transformations. I have lost account of the number of times students have discovered that I have a blog because they have been looking for the responses to an activity that I believed. Simply choose the transformations you want to use with your students and ignore the rest. I have included a blank response key in the file for this activity. By the way, the They work completely well for this.
